

Dear Recruiter,

I am a final-year Software Engineering student at Universiti Malaysia Pahang Al-Sultan Abdullah (UMPSA), with a CGPA of 3.84, and I am excited to apply for the software engineering internship at Finexus Group. My internship availability is from 10 March 2025 to 22 August 2025, with flexibility to start as early as 3 March 2025 or 17 February 2025.

Throughout my studies, I have gained a solid understanding of the software development lifecycle (SDLC) and built strong skills in JavaScript, Java, TypeScript, Python, PHP, MySQL, and PostgreSQL, which align closely with the technical requirements of this role. My academic journey includes developing Internseek, a web application using Laravel, React.js, Inertia.js, and MySQL, designed to streamline internship applications for undergraduates. Additionally, I was a Top 10 finalist in the UMPSA X Huawei Mobile App Competition 2023 for creating CodeQuizPro, a mobile app built with Ionic, React.js, TypeScript, and Firebase.

Recently, I expanded my skills by utilizing Node.js and Vue.js to build a file management system. These experiences reflect my commitment to continuous learning and my ability to deliver impactful solutions.

I am particularly drawn to this opportunity at Finexus Group because of your company's dedication to innovation and its positive reputation as a leading software company. The opportunity to be involved in real-world projects while learning from a team of experienced professionals is a great way for me to enhance my technical skills. Thank you for considering my application. I look forward to discussing how my skills and experiences align with your needs. My resume is attached for your reference.

Best regards,

Sho Ming Kang
